Why react

Javascript Refreshers

Defining Variables

variable_name = “hello world”

Const variableName = “hello world”
Let variableName = “hello world”

List/Array & Objects/ Dictionary

List = [....]

**Dictionary = {
 Key: value
}**

Const list = [....]

**Const dictionary = {
 Key: value
}**

Javascript Refreshers

Functions

Def function_name(argument):

...

...

return(...)

Const functionName = (argument) => {

...

...

return(...)

}

Loops

For x in list:
print(x)

list.map((x , index) => {
console.log(x)
}
)

HTML/CSS Refreshers

<div>

<div/>

HTML/CSS Refreshers

<div>

OBJECT

Components

JSX

Objects

Arrays

Functions

HTML

in javascript

```
<div>
  Item 1
</div>
<div>
  Item 2
</div>
```

```
<div>
{
  array.forEach( x =>
    <MySecondComponent
      firstProp = {x}
    />
  )
}
</div>
```

```
Const MySecondComponent = (props) => {
  return(
    <div>
      props.firstProp
    </div>
  )
}
```
